A draft of writing for your home page introduction:

Welcome to Crapple, the leader in pushing the boundaries of what it means to be human. Here at Crapple, we believe that technology is the ultimate key to surpassing the limits of our current human potential. From robotic arms to our new and revolutionary iEyes, the products that we offer are designed to enhance and improve every part of your life. Join us

A draft of writing for the "about" page, which details the fictitious organization/entity that is creating the website:

About Us: We [The fictitious entity, Crapple,] aim to be the leading company in furthering what humans are capable of doing and performing. Crapple was founded by two very intelligent thinkers, Jev Stobs and Weve Stozniak, -two half human, half robotic leaders of the transhumanist movement. Our objective is to convince individuals to integrate the power and speed of new technology into their bodies, to allow for the destruction of their once human limitations. Whether it's as simple as replacing one limb, or even adopting an entire robotic body, we believe that it is a step into the right future, one where technology makes us into the most productive we can be. You see, here at Crapple, we believe in more than just enhancement. We believe in being truly free and living life to the fullest.

3 pieces of "research" to support the premise of your Final Project.

1. [Extreme Tech: "What is transhumanism, or, what does it mean to be human?"](#)

“Transhumanism is a cultural and intellectual movement that believes we can, and should, improve the human condition through the use of advanced technologies. One of the core concepts in transhumanist thinking is life extension: Through genetic engineering, nanotech, cloning, and other emerging technologies, eternal life may soon be possible.”

The quote from Extreme Tech supports the premise of my final project as it explains how eternal life may be possible through the use of technologies such as genetic engineering and nanotech, which would be applied to our human bodies to improve upon our body’s design.

2. [The Guardian: "No death and an enhanced life: Is the future transhuman?"](#)

“The idea of technologically enhancing our bodies is not new. But the extent to which transhumanists take the concept is. In the past, we made devices such as wooden legs, hearing aids, spectacles and false teeth. In future, we might use implants to augment our senses so we can detect infrared or ultraviolet radiation directly or boost our cognitive processes by connecting ourselves to memory chips. Ultimately, by merging man and machine, science will produce humans who have vastly increased intelligence, strength, and lifespans; a near embodiment of gods.”

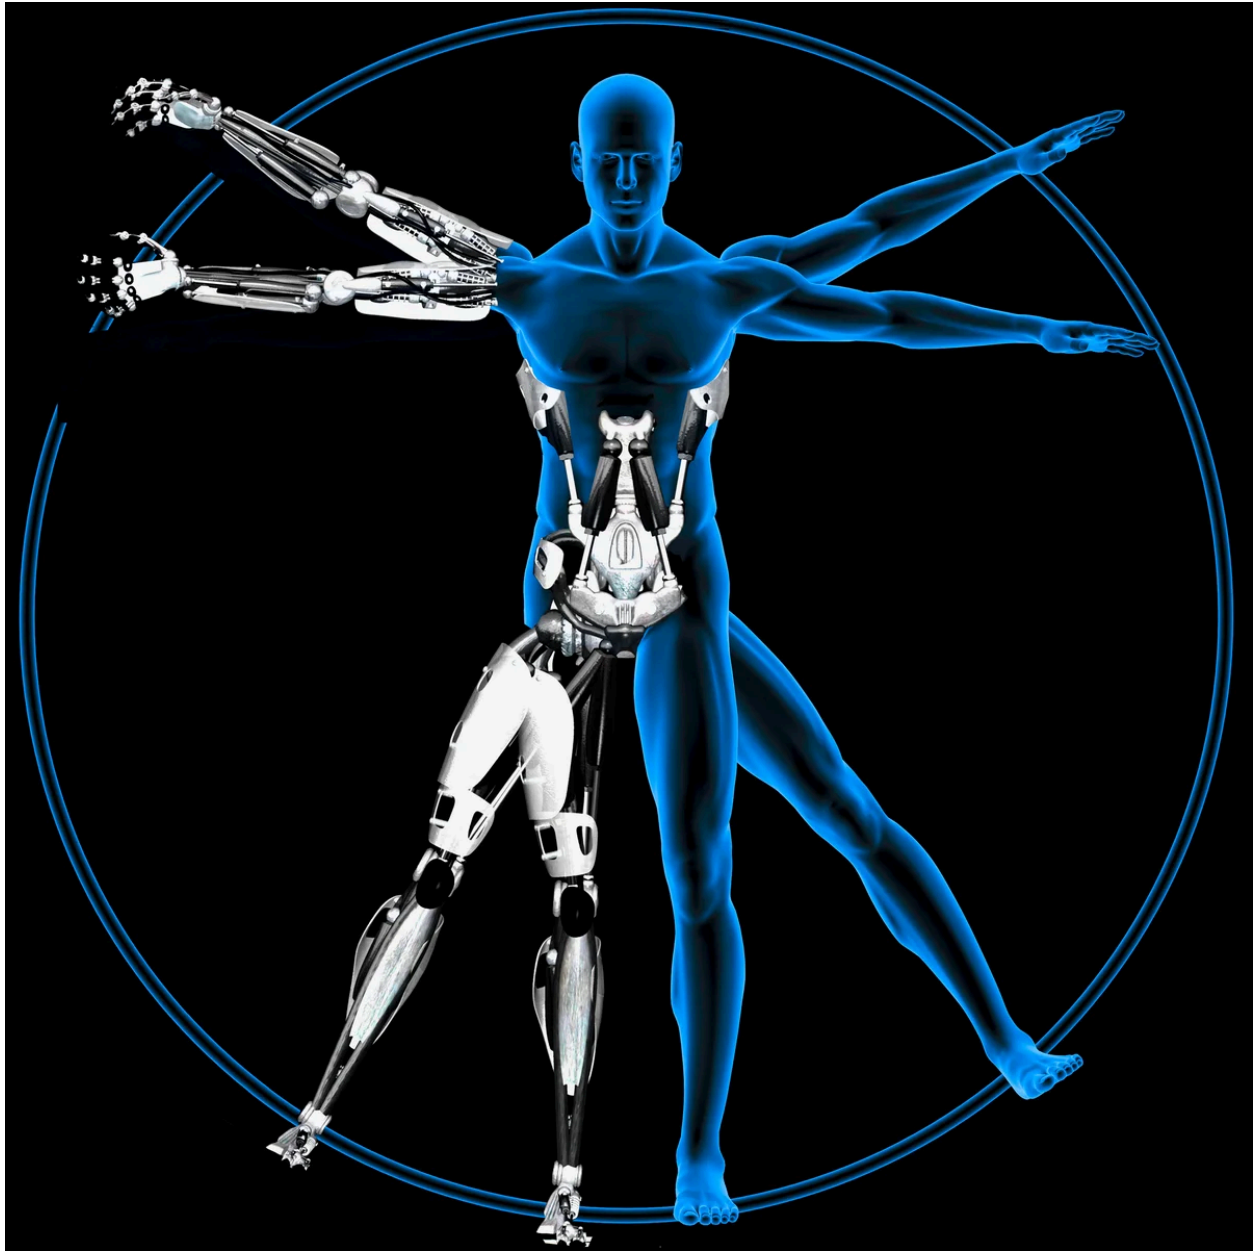

This quote from The Guardian supports the premise of my final project as they believe that the combination of man and machine will propel humans far. The Guardian even believes that transhumanism will make humans “a near embodiment of gods.”, which shows that they’re very supportive of this idea.

3. [Revista Idees/Miquel Casas: "The technological singularity and the transhumanist dream"](#)

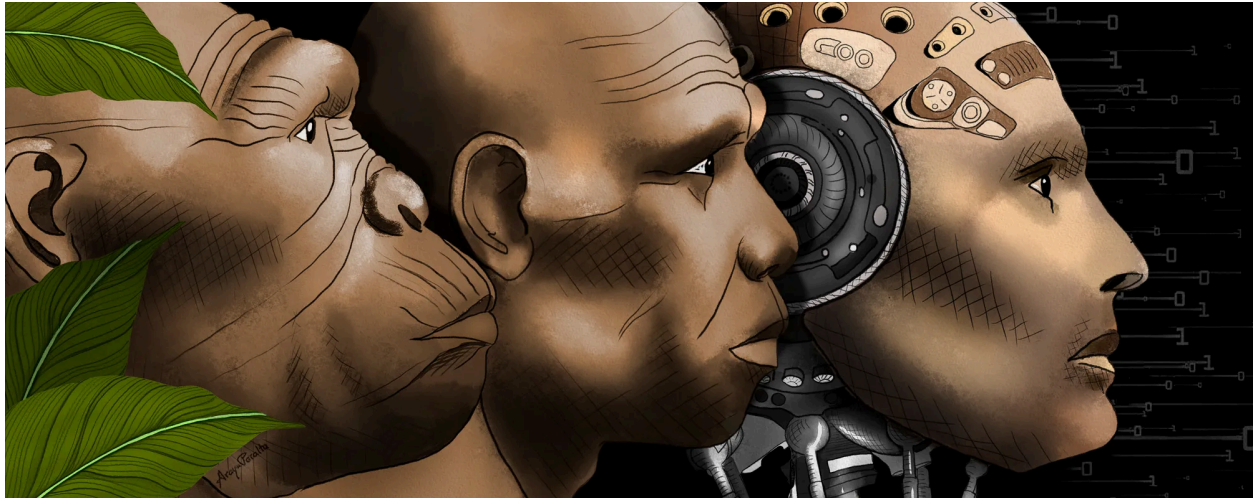

“Many of those who call themselves transhumanists have been arguing for decades that the technological singularity could solve humanity’s greatest ills: cure all disease, produce clean energy that helps to win the fight against climate change, reduce the cost of producing and distributing food to end hunger and develop technologies to colonise space so as to overcome overpopulation of the planet. At the same time, it might also make achievable the ancient dream of immortality, by digitising our brains and putting them in the cloud.”

Revista Idees supports Crapple’s ideas by providing ways that technology is used inside the body and how they could improve upon the lives of billions. Curing diseases, producing clean energy, and reducing the cost of food.

Any images that will be included in your "research".

Any videos or audio that will support your research.

I plan to be creating

A draft of writing regarding the recruitment/membership process

It is very easy to become a member at Crapple, as we are always looking for the next generation of innovators and those who want to help reshape humanity. Our membership program, The Collective Cyber Conscious, offers very exclusive access to the testing of new products and the opportunity to collaborate with transhumanists or even a starter internship at Crapple. Sign up today and start your journey toward a limitless future.

Members of the CCC also receive priority in robotic enhancements and installation upgrades.

A product offered by this website

Here at Crapple, we offer the latest and greatest robotic tech on the market. We are known for selling robotic versions of all body parts, limbs, organs, you name it! Crapple's newest and most anticipated invention is now on the market, the Crapple iEyes. For only 8000\$ per eye, you can get new eyes that can see even better than a regular person with perfect vision ever could!

(VERY rough sketch of the new iEyes)

A draft writing of the conclusion

At Crapple, we believe the future is in your hands—and your arms, eyes, and brain. Our mission is not just to improve lives but to redefine what life itself can be. As technology continues to evolve, so too can you. Whether you are here for a small upgrade or a complete transformation, Crapple invites you to take the next step toward a new way of living. The future is now. Are you ready?
